Atlanta, Georgia • 678-575-9889 • connormac9@icloud.com • [linkedin.com/in/connor-mcilhinney](https://www.linkedin.com/in/connor-mcilhinney) • [connormcilhinney.com](https://connormcilhinney.com)

## EDUCATION

---

### GEORGIA INSTITUTE OF TECHNOLOGY, COLLEGE OF COMPUTING

Bachelor of Science in Computer Science // Specializing in AI & Media

Master of Science in Computer Science

*Affiliations:* GTSF Investments Committee – Quant Sector, RoboJackets, Sigma Alpha Epsilon Fraternity – Georgia Phi Chapter

Atlanta, Georgia

*Expected Graduation:* December 2026

*Expected Graduation:* December 2027

## PROJECTS

---

### MACHINE LEARNING UFC FIGHT PREDICTOR

- Trained and compared Logistic Regression, Random Forest, and XGBoost classifiers, achieving 72% accuracy
- Built a hybrid data pipeline combining local CSV datasets with a Playwright + BeautifulSoup scraper on ufcstats.com
- Deployed a live FastAPI + Docker app on Fly.io serving real-time win probabilities via serialized joblib models with ROC-AUC, log-loss, confusion matrices, and a betting simulation comparing model edge against market-implied odds

### HIGHLIGHT GENERATOR

- Deployed and hosted with Render, enabling automated video generation and cloud-based video processing
- Built a computer vision app with Python, OpenCV, YOLOv8, and PIL to detect and highlight soccer players and balls in video, with interactive user selection and real-time overlays

### KEEN ARROW

- Built a mobile app using Apple's CoreBluetooth framework to receive directional data via a LoRa gateway
- Designed a LoRa-based tracking system where a transceiver-equipped arrow latches onto deer and transmits signals post-impact

## WORK EXPERIENCE

---

### EQUIFAX

Software Engineer Intern – CI/CD Team

Alpharetta, Georgia

May 2026 – August 2026

- Centralized Jenkins and GitHub Actions logs into BigQuery, consolidating CI/CD pipeline data across the organization into a unified, queryable data warehouse
- Analyzed log data at scale using BigQuery to identify recurring failure patterns and root causes across CI/CD pipelines
- Built an internal AI chatbot trained on log failure patterns to help engineers diagnose and resolve build failures in real time

### NODED

Software Engineer Intern

Atlanta, Georgia

August 2025 – January 2026

- Engineered Python backend services using Finnhub, Alpha Vantage, and RapidAPI to validate URLs, detect accessibility issues (e.g., redirects, paywalls, CAPTCHAs), and extract clean HTML content, improving news retrieval accuracy by 30%

### GTSF INVESTMENTS COMMITTEE – QUANT SECTOR

Quant Analyst

Atlanta, Georgia

August 2024 – January 2026

- Conducted quantitative analysis and developed data-driven models to identify investment opportunities
- Presented an insider trading strategy, trained on SEC Form 4 data, leading to its adoption within GTSF's \$2.6 million portfolio

### PDI TECHNOLOGIES

Software Engineer Intern – Cloud Infrastructure Team

Alpharetta, Georgia

June 2025 – August 2025

- Provisioned AWS infrastructure to deploy n8n, an open-source automation platform, backed by centralized PostgreSQL RDS
- Containerized n8n using Docker and orchestrated deployments with Terraform for a reliable, repeatable IaC workflow
- Rolled out n8n access to 2,400 employees, empowering organization-wide automation through a secure, cloud-native solution

### CANOPY

Software Engineer Intern

Peachtree City, Georgia

June 2023 - August 2023

- Shadowed CEO to gain insights into strategic decision-making and the development of client-focused software solutions
- Collaborated with the Head of Sales to identify targeted applications for Canopy's outbound clients

## COMMUNITY LEADERSHIP

---

### ATLANTA UNITED (MLS)

Unified Partner, Captain

Atlanta, Georgia

September 2023 - Present

- Mentored and coached Atlanta United's Special Olympics Team and competed against other MLS teams across the country

## TECHNICAL SKILLS

---

*Technologies:* AWS, GCP, Docker, n8n, ADO, PostgreSQL, Flask, Python, Java, SQL, C++, Terraform, TypeScript, YOLO, Render
